PROFESSIONAL SUMMARY

Managers do not want a spreadsheet. They want to know what to reorder, what to push and what is sitting unsold. That question drives my work as a Data Analyst at Cougar Clothing, where I sit with the online operations, ecommerce and warehouse teams and turn their sales and stock numbers into something they can act on. Sell-through, stock movement, product availability, sales trends: all of it ends up in management reports. I also planned and deployed a live dashboard for the company, so daily, weekly and monthly figures now live in one place instead of several files.

CORE SKILLS

Retail and ecommerce analytics: MIS reporting, sales performance, MoM and YoY comparisons, sell-through, stock ageing, replenishment, size availability, fill rate, GA4 and conversion analysis.

Data and reporting tools: Advanced Excel, Power Query, Pivot Tables, XLOOKUP, INDEX MATCH, VBA, Power BI (intermediate), SQL, Candela Retail, Ginko and Shopify.

Technical: SQL (joins, subqueries, views), database management, data cleaning. Next.js, React, JavaScript, HTML, CSS, Tailwind CSS, GitHub, Vercel. Basic API knowledge.

PROFESSIONAL EXPERIENCE

Data Analyst | Cougar Clothing
June 2025 – Present | Lahore, Pakistan

• Every day I prepare the sales, stock, sell-through and MIS reports for the online and ecommerce side, usually after talking to the warehouse and merchandising teams about what they need.

• Which articles sell and which ones sit? With up to 1,000 articles spread across categories, genders and seasons, I track best sellers, slow movers, missing sizes and items due for replenishment.

• Retail systems, Shopify and spreadsheets each held part of the story, and the three rarely matched. I brought them together, and management now works from a single set of stock and sales figures.

• Excel does most of the heavy lifting here. Power Query, Pivot Tables, formulas and VBA handle the cleaning, reconciliation and presentation of large datasets.

• Reporting that took about 30 minutes now takes 15.

• My reports reach department heads, ecommerce and warehouse managers, the merchandising team and senior leadership.

SELECTED PROJECT

Cougar Desk 2.0 | Live Retail Analytics Dashboard
Developed for Cougar Clothing | Independent project with AI-assisted development

• I handled the whole build, from planning and design to deployment, using Next.js, React and Tailwind CSS. GitHub tracks the versions and Vercel hosts the live site.

• Behind the dashboard sit more than 700,000 historical records, collected through daily updates since August 2026.

• Top-performing articles, sales trends, category and season performance, stock movement, inventory health: each has its own view.

• Online, offline and warehouse stock can be compared in one report, down to size availability and article-level fill rates.

• Product timelines show when a size sold out, when stock changed and when an item came back.

• Teams no longer wait for a custom report each time someone asks a question. Daily, weekly and monthly analysis is already there, which helps with inventory planning and management decisions.

EARLIER EXPERIENCE

Administrator | Qadir Foundation
June 2024 to May 2025

• Looked after administrative records and documentation, and organized routine data for the daily running of the office.

Data Collector | Government Dastak Program
May 2023 to May 2024

• Collected citizen information through online systems, verified each record and submitted it for government department use.

EDUCATION

Bachelor's in Computer Science (14 years of education) | Government College University Faisalabad (GCUF) | October 2024
Diploma in Information Technology (DIT) | Qadir Foundation | One-year diploma

---

CERTIFICATION

SQL (Advanced) | HackerRank | 2026

LANGUAGES

Urdu, Punjabi and English (intermediate)
